                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This invention describes a novel human conductin protein which has anti-tumour activity. Detecting the presence or amount of conductin, at protein or nucleic acid levels, is used to disgnose tumours, while agents that (re)activate conductin are used for tumour therapy. Conductin binds to beta-catenin and induces its cytoplasmic degradation, resulting in blockade of the Wnt/Wingless signalling pathway in vertebrates. Conductin also binds to Adenomatous Polyposis Coli (APC) fragments and, in conjunction with APC, acts as a tumour suppressor.
                                                                                                                                                                                       Region
                                                                                                                                                                                                                      Binding-site
                                                                                                                                                                                                                                                     Binding-site

Nucleic acids encoding mutant and wild type Axin and oligonucleotides derived from them are useful for detecting mutations in the Axin gene and for determining whether a subject likely to develop cancer (including breast, colorectal, gastrointestinal, esophageal, carcinomas or melanomas). The wild
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This invention describes a novel human conductin protein which has anti-tumour activity. Detecting the presence or amount of conductin, at protein or nucleic acid levels, is used to diagnose tumours, while agents that (re)activate conductin are used for tumour therapy. Conductin binds to beta-catenin and induces its cytoplasmic degradation, resulting in blockade of the WntyWingless signalling pathway in vertebrates. Conductin also binds to Adenomatous Polyposis Coli (APC)
                                                                                                                                                                                                                                                                                                                                                                                    Axin; cancer; breast cancer; colorectal cancer;

Nucleic acids encoding mutant and wild type Axin and oligonucleotides derived from them are useful for detecting mutations in the Axin gene and for determining whether a subject is likely to develop cancer (including breast, colorectal, gastrointestinal, esophageal, carcinomas or melanomas). The wild type Axin and homologues of Axin are useful for treating subjects who are likely to develop cancer (thyroid carcinomas). The nucleic acids are also useful for diagnosing cancer and for detecting mutations in cancerous cells. Wild type Axin, its antisense molecule and identified compounds form pharmaceutical compositions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               type Axin and homologues of Axin are useful for treating subjects who are likely to develop cancer (thyroid carcinomas). The nucleic acids are also useful for diagnosing cancer and for detecting mutations in cancerous cells. Wild type Axin, its antisense molecule and identified compounds form pharmaceutical compositions in the treatment of cancer. The compositions are also useful for treating cancer by inhibiting tumorigenesis (by inducing degradation of beta-catenin). The nucleic acid encoding Axin acts through negative regulation of the Wnt pathway in the Nieuwkoop Center.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     in the treatment of cancer. The compositions are also useful for treating cancer by inhibiting tumorigenesis (by inducing degradation of beta-catenin). The nucleic acid encoding Axin acts through negative regulation of the Wnt pathway in the Nieuwkoop Center.

The method can be used for identifying agonists and antagonist of nuclear receptors.

The protein has a mol. wt. about 129 kD. The gene is expressed at the G2/M border of the cell cycle and can inactivate theil cycle progression protein cdc2 kinase. The gene was isolated by functional complementation of a yeast weel/miki mutant strain. The gene and protein can be used in the determination of cancer cell development and as an antimitotic
                                                                                                                                                                                                                                                                                          New isolated nucleic acids and secreted proteins - obtained from human adult ovary, human foetal kidney, human foetal brain and human adult brain cDNA libraries
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              W29659 standard; Protein; 397
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    QΥ
                                                                                    밁
                                                                                                            telomere length or modulates telomerase activity. Its amino acid sequence was deduced from a cDNA clone (see V19480) obtained from a cDNA clone (see V19480) obtained from a cDNA clone (see V19480) obtained from a cDNA clone (see W19480) obtained from the constitution of the constitution of the vitro telomerase of the constitution in methods for reconstituting in vitro telomerase or other enzymatic activities that maintain telomeres and regulate telomere length. These methods have application in screens for therapeutic agents, and for diagnostic tests. In addition, peptides corresponding to TPC2 or TPC3 proteins can also be used to regulate telomere length and telomerase activity in mammalian cells. Immunogenic peptides and proteins of the invention can also be used in therapeutic immunisation and vaccination procedures. Antibodies that specifically bind to TPC2 or TPC3 proteins can be used in screening, diagnosing and monitoring diseases and other conditions, such as cancer, pregancy or fertility.

                                                                                                                                                                                                                                                                                                                                           This sequence is the human TPC3 protein, which is contained within the recombinant mammalian host cell of the invention. The invention provides methods and reagents for regulating telomerale length and modulating telomerase activity in mammalian cells as well as for detecting, diagnosing, and treating related diseases and conditions as cancer, pregnancy, or fertility in humans and other mammals.

                                                                                                                                                                                                                                                                                                                                                                                                           neuroprotective activities. The human transmembrane proteins, polynucleotides encoding them and other compositions and methods from the present invention, can be used for the diagnosis, treatment or prevention of immune, reproductive, smooth muscle, neurological, gastrointestinal, developmental and cell proliferative disorders. The HTMPN's can be used to treat or prevent disorders associated with a decreased expression or activity of HTMPN.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           GC GP900 antibody production, and to a method of cryptosporidiosis treatment CC or prophylaxis comprising administration of anti-GP900 antibodies to an competitively inhibit sporozoite or merozoite attachment or invasion, and care also useful for the generation of anti-GP900 fragments are able to competitively inhibit sporozoite or merozoite attachment or invasion, and care also useful for the generation of anti-GP900 antibodies. The cc antibodies also inhibit sporozoite or merozoite attachment/invasion and cd additionally inhibit the binding of GP900 ligands to GP900. GP900 cc proteins, fragments and antibodies may therefore be used to treat or prevent cryptosporidiosis. Infection with Cryptosporidium is a common cc use of diarrhoea in humans and causes life-threatening diarrhoea in cc immunocompromised persons. Cryptosporidiosis can be contracted from cc contaminated municipal water supplies (e.g., public swimming pools). It is also a cause of disease in animals, resulting in financial losses in ca agriculture. GP900 fragments, fusion proteins and antibodies may also be used for the diagnosis of Cryptosporidium parvum infections, and for the cused for the diagnosis of Cryptosporidium parvum Iowa containts of the Cryptosporidium parvum Iowa containts of the Cryptosporidium parvum Iowa containts of contains a putative transmembrane domain and a cc of GP900, which contains a putative transmembrane domain and a

                                                                                                                                                                                                    Cryptosportidium parvum, DNA encoding it, GP9900 fragments, and fusion CC cryptosportidium parvum, DNA encoding it, GP9900 fragments, and fusion CC administration of GP900 or fragments thereof to a host to ellicit anti-CC GP900 antibody production, and to a method of cryptosporidiosis treatment CC or prophylaxis comprising administration of anti-GP900 antibodies to an individual cryptosporidium parvum GP900 and GP900 fragments are able to CC competitively inhibit sporozoite or merozoite attachment or invasion, and CC are also useful for the generation of anti-GP900 antibodies. The CC antibodies also inhibit sporozoite or merozoite attachment or invasion and CC anditionally inhibit the binding of GP900 ligands to GP900. GP900 GP900 proteins, fragments and antibodies may therefore be used to treat or prevent cryptosporidosis. Infection with Cryptosporidium is a common CC cause of diarrhoea in humans and causes life-threatening diarrhoea in immunocompromised persons. Cryptosporidiosis can be contracted from CC contaminated municipal water supplies (e.g., public swimming pools). It is also a cause of disease in animals, resulting in financial losses in agriculture. GP900 fragments, fusion proteins and antibodies may also be used for the diagnosis of Cryptosporidium parvum infections, and for the CC detection of the parasite in the environment. The present sequence crepresents the GP900 protein of the Iowa isolate of Cryptosporidium

   Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                    332

EMBO J. 17:1371-1384(1998).

-I- FUNCTION: INHIBITOR OF THE WNT SIGNALING PATHWAY. DOWN REGULATES BETA-CATENIN. PROBABLY FACILITATE THE PHOSPHORYLATION OF BETA-CATENIN AND APC BY GSK-3B (BY SYMILARITY).

-I- SUBUNIT: INTERACTS WITH GSK-3B AND BETA-CATENIN. THE INTERACTION BETWEEN AXIN AND BETA-CATENIN OCCURS VIA THE ARMADILLO REPEATS CONTAINED IN BETA-CATENIN. TERNARY COMPLEX. ALSO BINDS TO PLAKOGLOBIN (GAWAA-CATENIN), APC, DVL AND PP2A (BY SYMILARITY).

-I- SUBCELLULAR LOCATION: CYTOPLASMIC (BY SIMILARITY).

-I- TISSUE SPECIFICITY: HIGHLY EXPRESSED IN TESTIS, THYMUS AND LUNG FOLLOWED BY CEREBRUM, CEREBELLUM, HEART, KIDNEY, SKELETAL MUSCLE, SPECIFION AND LUNG FOLLOWED BY CEREBRUM, CEREBELLUM, HEART, KIDNEY, SKELETAL MUSCLE,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     01-OCT-2000 (Rel. 40, Created)

                                                                CATENIN AND APC BY GSK-3B (BY SIMILARITY).

SUBUNIT: INTERACTS WITH GSK-3B AND BETA-CATENIN. THE INTERACTION BETWEEN AXIN AND BETA-CATENIN OCCURS VIA THE ARMADILLO REPEATS CONTAINED IN BETA-CATENIN. TERNARY COMPLEX. ALSO BINDS TO PLAKOGLOBIN (GAMMA-CATENIN), APC, DUL AND PP2A (BY SIMILARITY).

SUBCELLULAR LOCATION: CYTOPLASMIC (BY SIMILARITY).

ALTERNATIVE PRODUCTS: 2 ISOFORMS; 1 (SHOWN HERE) AND 2; ARE PRODUCED BY ALTERNATIVE SPLICING.

TISSUE SPECIFICITY: EXPRESSED IN EMBRYONIC STEM CELLS.
DEVELOPMENTAL STAGE: WIDELY EXPRESSED AT ELO.5 TO E16.5 DAY.
DEVELOPMENTAL STAGE: WIDELY EXPRESSED AT ELO.5 TO E16.5 DAY.
